

Souvenir

2019

Assignment: collaboration project

Theme: recycling

Material: glass

Size: 52 sticks each 15cm long and a box 18cmx18cm

A project where a place in Israel has been visualised.

It is a game made out of recycled material, given color according to the RGB-system.
Each stick is unique and refers to a picture from a bigger entity: the district Nachlaot in Jerusalem.

The Play Rules

- 1" Divide the sticks among the players. When this is an uneven number, you position the remaining stick(s) as start stick(s).
- 2" Alternatively position a stick:
 - every color has to be placed on the same color;
 - except for red, this part can be put on every color;
 - you can choose to connect one or more colors with each other.
- 3" If a stick falls off the construction after it was placed, you have to skip a turn.
- 4" Play till someone has used up all of their sticks. That person is the winner of the game.
