

AccumulationI

2019

Assignment: further interpretation on project groentopic

Theme: fragility of the spine

Material: glass, porcelain

Size: depends of the construction, but one piece is around 5cmx5cm

Accumulation I refers to the possible flaws within the spine.

The composition seeks the boundary between balance and tension.

This is due to the fragile choice of materials,
and by placing the forms too close so that they can collapse at any moment.
